Biodiversity & Ecology 7

Fairy Circles of the Namib Desert

Ecosystem engineering by subterranean social insects

Acknowledgements

Above all others, I thank my family, Irmel, Mona, Laura, to whom I dedicate this book.

I am also grateful to my academic teachers who paved the road to a broad spectrum of methods in biology and ecology, Günter Miehl, Hans-Dieter Ihlenfeldt, Heinz Ellenberg and Heinrich Walter.

During the four decades of studies on fairy circles I received help from many sides. I would like to particularly thank a number of colleagues and institutions.

In **Angola**, Fernanda Lages and Valter Chissingui at Instituto Superior de Ciências de Educação (ISCED, Lubango), Margarida Ventura and Carlos Ribeiro from Instituto Superior Politécnico Tundavala (ISPT) helped in terms of practical and administrative support. Bruce Bennett made many weeks of joint fieldwork in Iona National Park possible. Rafael Loureiro is thanked for sharing his knowledge on localities north of Bentiaba. I am grateful for research and export permits from the Angolan authorities. I thank Gabriel Luis Miguel, General Director for the National Technology Centre, Ministry of High Learning, Science, Technology and Innovation, as well as Chipilica Barbosa (Southern African Science Service Centre for Climate Change and Adaptive Land Management – SASSCAL– program coordinator in Angola) and the whole Angolan SASSCAL team. Thanks to Canga Xiaquivuila, Director of Instituto Geológico de Angola (IGEO), for making available the Geological Map of Angola. Numerous Himba pastoralists in the Namibe Region answered questions regarding the origin of fairy circles.

In **Namibia**, I first of all thank Elke Erb (Scientific Society Swakopmund), who introduced me to the organisms and environments of the Central Namib Desert and gave continuous logistic support. Manfred Goldbeck generously and continuously supported the research in many ways, as did the Gondwana Collection team, many thanks especially to Alain and Sonja Noirfalise, Anja von Reeken and Jörg Fischer, as well as to journalist Sven-Eric Stender.

I thank Vilho Pandeinge Mtuleni for always good company and successful guidance and an unsurpassable sharp eye to detect termite colonies, for finding reliable solutions for uncountable cases of technical problems and for enabling good communication with many rural communities and conservancy managers during many dozens of fieldwork campaigns.

Bertchen Kohrs was the “mother” of our projects and her friendly diplomacy opened many doors. Without her help, many activities would not have been possible.

I am grateful that Antje and John Burke, Mary Seely, Joh Henschel and Graham Williamson invited me to joint field trips to fairy circle landscapes.

Numerous Himba and Damara stock farmers answered questions regarding the origin of fairy circles in north-western Namibia. The Mariental and the Sesfontein conservancy kindly supported the research in their region. Permission to work in the Namibrand Nature Reserve is gratefully acknowledged.

I thank Klaus Knupp, Earthmaps Consulting, Swakopmund, Namibia, for allowing the reproduction of a ground penetrating radar image and for the interpretation of the shown GPR patterns. The Ministry of Environment, Forestry and Tourism Namibia (MEFT), National Commission on Research Science and Technology (NCRST), and National Botanical Research Institute (NBRI) are thanked for research permission in Namibia. I thank the National Herbarium of Namibia (WIND) for access to herbarium data and digital herbarium records. The National Museum kindly gave access to the entomological collection. I thank the Geological Survey of Namibia for making available the Geological Map of Namibia.

In **South Africa** I thank Annelise Le Roux, Fiona Archer, Hugo Bezuidenhout, Robby Robinson and Paddy Gordon, who substantially supported the early work in the Richtersveld. Brent Whittington gave logistic support in the Richtersveld National Park. Pieter Van Wyk shared his knowledge of the flora and the cultural history of the Richtersveld. Thanks to the South African National Biodiversity Institute (SANBI) for access to herbarium

data and digital herbarium records. Several stock farmers in the Richtersveld answered questions on the origin of fairy circles and heuweltjies.

I am most grateful to all the authors contributing their fine analyses and papers to this volume: Alicia Geppert, Felicitas Gunter, Alexander Gröngroft, Joh R. Henschel, Katharina J. Huber, Jens Oldeland, Jörg Overmann, Joe McAuliffe, Javier Pascual, Mike Picker, Rasmus Revermann, Priscilla Sichone, Johannes Sikorski and Andrey Yurkov.

Especially Joe McAuliffe and Joh Henschel helped to substantially improve the English wording of several chapters. Many thanks also for helpful discussions of objective terms like “desert vegetation islands” or “contour-parallel vegetation bands”.

Sincere thanks to the editors of this volume of *Biodiversity & Ecology*, Ute Schmiedel and Manfred Finckh, who invited and coordinated the reviews for all the chapters and articles of this volume and beyond that invested time and effort to further edit the chapters.

I also thank numerous anonymous reviewers for their helpful remarks. All the invested scrutiny improved the quality of the book substantially.

Funding is gratefully acknowledged as being provided by the SCHIMPER FOUNDATION and the German Science Foundation (DFG, SFB 389 [ACACIA]) in the early days and the Federal Ministry of Education and Research, BMBF (Biota Southern Africa, SASSCAL) during the last 22 years.

This book would not have been possible without the constant help of the team Biodiversity, Evolution and Ecology at the Institute of Plant Science and Microbiology of the University of Hamburg. Imke Oncken, Jutta Kießelbach and Karen Dehn supplied laboratory data. Ingo Homburg took a huge amount of administrative and organisational work from my shoulders. Gerhard Muche developed the ingenious software BiotaBase and Kathrin Josenhans, Thomas Hillmann and Andrzej Suwald handled the ever-growing dimension of newly collected data. I am grateful that Celina Apel, Elke Erb, Constanze Grohmann, Joh Henschel, Balten Laustroer and Thomas C. Wagner permitted use of their photos.

It is impossible to name all who helped during decades of field work. I particularly want to thank Judy Beaumont, Bruce Bennett, Hugo Bezuidenhout, Volker Bittrich, Clärin Kübli, Antje Burke, Wolf Eiserhardt, Elke Erb, Georg Erb, Barbara Fally-Puzskas, Sara Fernandez and David Elizalde, Manfred Finckh, Lynn Fish, Stefan Franke, Duncan Gilchrist, Paddy Gordon, Alexander Gröngroft, Felicitas Gunter, Wulf Haake, Berit Hachfeld, Stefan Heitmann, Joh Henschel, Ingo Homburg, Brian Huntley, Andrea Jensen, Mona Jürgens, Laura Jürgens, Steffanie Kaffarnik, Detlev, Christine, Insa und Greta Kaldinski, Sven-Eric Stender, Kasara Paulus, Lisa Prigge, Felix, Marianne, Anna and Tangeni Kuchling, Irmtraut Lalk-Jürgens, Annedore Lalk & Uwe Breiden, Vilho Mtuleni, Jens Oldeland, Imke Oncken, Mike Picker, Evanilton Pires, Dieter Pochlatko, Carlos and Margarida Ribeiro, Mbeytjiua Rikambura, Vere Ross-Gillespie, Annelise Le Roux, Alfred Schleicher, Ute Schmiedel, Michael Struck, Matthias Schultz, Janika Wendefuer, Graham and Francoise Williamson, Kelly Vlieghe and Pieter Van Wyk.

Antje Burke, Barbara Curtis, Jörg Ganzhorn, Wulf Haake, Morgan Hauptfleisch, Klaus Knupp, Eugene Marais, Gretel van Rooyen, Ben Strohbach and Roger Swart kindly helped with regard to data and shared their interpretation of the fairy circles.

Finally, sincere thanks to Klaus Hess and his team, for the patience, care and good guidance during the production process of the printed volume.

Norbert Jürgens
