-------------------------------	----

About this book	12
------------------------------	----

Abstract	13
-----------------------	----

Chapter 1 What is a fairy circle?	14
--	----

Chapter 2 The Namib Desert and the Namib Fairy Circles	18
---	----

2.1 History	20
-------------------	----

2.2 Biogeography	21
------------------------	----

2.3 Distribution of fairy circles within the Namib Desert	23
---	----

Chapter 3 Morphology and vegetation features of the Namib Fairy Circles	24
--	----

3.1 Fairy circle morphology	26
-----------------------------------	----

3.2 The bare patch	27
--------------------------	----

3.3 The perennial belt	28
------------------------------	----

3.4 The halo	30
--------------------	----

3.5 The matrix	33
----------------------	----

3.6 Continuous halo grassland	33
-------------------------------------	----

3.7 The ephemeral belt	35
------------------------------	----

Chapter 4 The debate on the origin of fairy circles in the Namib and the role of termites as their originators	36
---	----

4.1 Introduction—a short history of research on the origin fairy circles	38
--	----

4.2 A brief comparison of the most important hypotheses	40
---	----

4.3 Diversity of termites in the Namib Desert	43
---	----

4.4 The sand termites of the genus <i>Psammotermes</i> , originators of the fairy circles of the Namib from Iona in Angola to South Africa	44
---	----

The position of the sand termites within the phylogenetic tree of termites	44
--	----

The distribution of the sand termites in southern Africa	44
--	----

Not one but several: morphological diversity within the sand termite <i>F. Gunter, J. Oldeland, J.R. Henschel, M.D. Picker & N. Jürgens</i>	45
--	----

Phylogeny of sand termites <i>F. Gunter, J.R. Henschel, M.D. Picker, J. Oldeland & N. Jürgens</i>	51
--	----

Reproduction of sand termites and local genetic patterns	
<i>F. Gunter, J. Oldeland, J.R. Henschel, M.D. Picker & N. Jürgens</i>	54
Food of sand termites	56
Nests of the sand termites	56
Water balance of sand termites	60
A practical guide: which observations at a fairy circle indicate sand termite activity?..	61
Why does the geographical range of the fairy circles not match the distribution area of the sand termites?	62
4.5 A new species of harvester termites, causator of the giant fairy circles near the village Baba in the northern Namib in Angola	
<i>N. Jürgens, F. Gunter, J. Oldeland, A. Groengroeft, J.R. Henschel, I. Oncken & M.D. Picker</i>	63
4.6 <i>Hodotermes mossambicus</i> causes large circular bare patches under rare circumstances <i>N. Jürgens & F. Gunter</i>	75
Chapter 5 The life history of Namib Fairy Circles	76
5.1 Processes related to the formation of new fairy circles in the Namib Desert	78
5.2 Maintenance of adult fairy circles: basic observations	81
5.3 The dynamic life of adult fairy circles: growing, shrinking and recurrence	88
5.4 The “end” of fairy circles	98
5.5 About the age of the fairy circles: immortal fairy circles or periodic resurrection in a breathing system?	106
5.6 Life history and age of fairy circles: a short summary	112
Chapter 6 Diversity: a journey through landscapes of the Namib Region characterized by different fairy circles	114
6.1 “Baba” Fairy Circles: the largest of all fairy circles—formed by harvest termites.....	116
6.2 “Iona”: images of a distant planet—fairy circle patterns in dunes.....	119
6.3 The “Kunene Sand Plains”: Namibia’s largest fairy circles—caused by sand termites and enlarged by wind erosion.....	126
6.4 The “Halo Plains”: the world of the largest halos.....	129
6.5 “Hartmann Valley”: between desert and continuous grassland	133
6.6 “Marienfluss Valley”: biotic interactions on red sand.....	134
6.7 “Giribes”: a fairy circle paradise surrounded by rocks	141
6.8 “Damara”: from Twyfelfontein via Sorris-Sorris to the northern Central Namib: fairy circles between Mopane and Welwitschia	144
6.9 “Southern Central Namib”: isolated sand deposits between calcareous crusts and clay pans	148
6.10 Dune valleys south of “Gobabeb”: fairy circles in <i>Stipagrostis gonatostachys</i> grassland.	150
6.11 “Southern Namib”: the largest and densest clusters of small fairy circles	151

6.12 Fairy circles in southern “Namaland”	156
6.13 Fairy circles at the edge of the “Southern Kalahari”	157
6.14 “East Gariep”: fairy circles in isolated dune systems and sandy basins in rocky landscapes	159
6.15 “Succulent Karoo”—ancient fairy circles in a world of water storage in plants	161
Chapter 7 Biogeography and ecology of Namib Fairy Circles: important environmental variables and processes	166
7.1 The distribution of fairy circles in the Namib	168
7.2 Biogeographical diversity of fairy circle features	172
7.3 Climatic diversity of fairy circle landscapes <i>N. Jürgens & J. Oldeland</i>	178
7.4 Soil properties of fairy circle landscapes <i>A. Gröngroft & N. Jürgens</i>	180
7.5 Soil moisture and hydrology of fairy circles <i>A. Gröngroft & N. Jürgens</i>	185
7.6 Methane and other gases are released from fairy circle bare patches	198
7.7 Magnetic minerals at fairy circle bare patches	200
7.8 Fairy circles and related structures as landscape elements	200
Chapter 8 Organisms and their interactions found on, underneath and around fairy circles.....	212
8.1 Plants	214
8.2 Animals <i>J.R. Henschel & N. Jürgens</i>	229
8.3 Microorganisms	250
8.4 Evidence for <i>Psammotermes allocerus</i> termite nests as refugium for plant pathogenic microbes: a contribution to generation and maintenance of fairy circles in the Namib Desert <i>A. Yurkov, J. Pascual, J. Sikorski, A. Geppert, F. Gunter, K.J. Huber, N. Jürgens & J. Overmann</i>	254
Chapter 9 Patterns resembling fairy circles	274
9.1 Circular vegetation patterns formed by clonal growth of single plants and their ramets.....	276
9.2 Rings of several individual plants	278
9.3 Bare patches in the vegetation caused by colonies of burrowing small mammals.....	284
9.4 Circular structures engineered by social insects other than sand termites	285
9.5 Bare areas caused by <i>Hodotermes mossambicus</i> in the northern Namib Desert <i>N. Jürgens & F. Gunter</i>	286
9.6 Polygonal to circular „Desert Vegetation Islands“ (DVI).....	292
9.7 Polygonal vegetation patterns	298

Chapter 10 Other regular landscape structures in southern Africa created by termite-driven ecosystem engineering	300
10.1 Heuweltjies—the “Little Hills” of western South Africa <i>J. McAuliffe</i>	302
10.2 <i>Macrotermes natalensis</i> termite colonies in seasonally flooded savannas <i>N. Jürgens, P. Sichone, R. Revermann, F. Gunter & J. Oldeland</i>	340
10.3 <i>Macrotermes michaelseni</i> mounds in the thornbush savanna of Namibia	349
Chapter 11 Beyond termites: an outlook on linear vegetation patterns in the Namib Desert	
11.1 Contour-parallel vegetation bands	355
Chapter 12 Conclusions	
Concluding remarks on Namib Fairy Circles, their origin, phenology, ecology, dynamics, ecosystem function and similarities to other vegetation patterns.....	362
Methods	364
Glossary and abbreviations	366
Bibliography	367
Institutional affiliations	374
